

Curriculum Management Program

Compliance, consistency, transparency and ease of use are four of the most critical factors in successful curriculum management. The Curriculum Management Program (CMP) seeks to enable all four factors, through a technology-based, people centered solution underpinned by appropriate policy and related procedures.

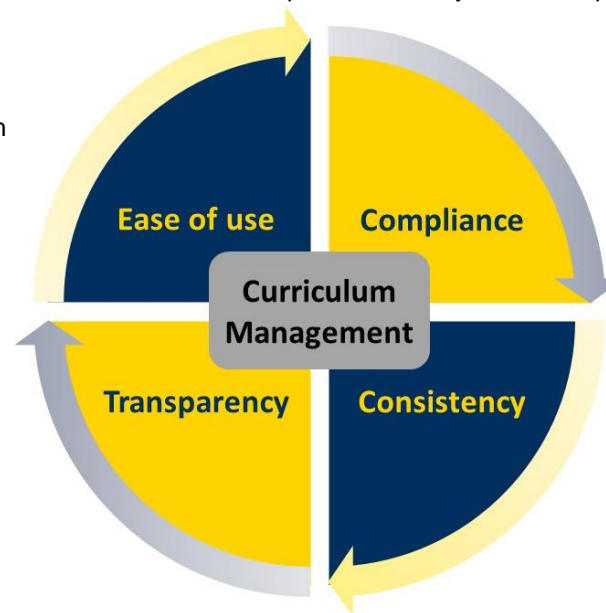

Flinders currently operates in a complex environment without a single system to store and manage curriculum information related to its 2764 topics and associated learning outcomes, 518 coursework courses, over 3000 active Statement of Assessment Methods (SAM) and the University's graduate qualities.

We are seeking a solution that will:

- Support Flinders' flexible program structures and associated curriculum
- Validate unit values, topic availabilities and course structures (course rules) to ensure students can successfully progress through their degree
- Identify topic and enrolment incompatibilities (eg. prerequisites not met, insufficient topics for students to enrol in for a study period or misaligned enrolment/ study plan)
- Integrate with, and act as the 'source of truth' for a range of systems, including the Learning Management System, Student System and University websites

The successful implementation of the CMP will have wide reaching benefits for academic and professional staff, students and external bodies, such as:

- Greater topic and course compliance and quality assurance
- Improved system generated/automated reporting
- Transparency regarding how topic/ course changes impact other course structures and course learning outcomes
- Visibility of dependencies between topics/ courses
- Greater automation of processes and workflows resulting in reduced staff workloads
- More clearly defined and consistent process flows
- Greater system integration, reducing duplicate effort
- Consistency of information and data wherever it is accessed
- Reduced demand from students as they can self-serve enrolment and study plan information
- Visibility of how assessments and topics contribute to a student's achievement of graduate qualities
- Improved industry relationships
