

Cancer Council SA's Beat Cancer Project Funding Program

The Beat Cancer Project is a South Australian state-wide initiative intended to support and advance cancer research within the state. It is funded by Cancer Council SA, the SA Government (through SA Health), the Australian Government Medical Research Future Funds and administered by the South Australian Health and Medical Research Institute (SAHMRI).

The objectives of the Beat Cancer Project are to increase funding for cancer research, increase the capacity for researchers to attract more national and international research grants, and build a stronger cancer research workforce and broader research infrastructure in South Australia.

Applications will soon open in the following funding categories. We ask potential applicants to refer to the Scheme-Specific Funding Guidelines for further information relating to each Scheme.

Researchers will be required to complete an on-line application form – the link to the form will be accessible on the date that the scheme opens. Please refer to the Beat Cancer Project website to access the link to the application form.
